Analytics Guide

1. Open Google Looker Studio and create a new report.
2. Add a MySQL connector pointing at the CAS database.
3. Paste the provided SQL query from the Analytics page.
4. Set your report time zone and refresh schedule.
5. Use questionnaire title, period, and work function for filters.

Tips:
- Use response_created_at for time series charts.
- Use response_status to filter approved submissions.
- Use item_text and item_answer for detailed breakdowns.
